

COLLEZIONE BAGNO
BATHROOM COLLECTION

 **900 INNOVA**

Indice

I **Mobili Bagno 900 Innova by 900 Project** sono realizzati in agglomerato di marmo. Le nostre vasche e i piatti doccia sono scavati da blocchi interi, rifiniti a mano totalmente in curva, eliminando angoli e punti di giuntura, creando così superfici curve.

The 900 Innova bathroom furniture by 900 Project is made of marble agglomerate. The 900 INNOVA bathtubs and shower trays are carved from solid blocks, hand-finished with curved shapes.

PIATTO DOCCIA

Nuvole con tecnologia antibatterica UV-C

TECNOLOGIA UV-C

PIATTI DOCCIA con tecnologia antibatterica UV-C. Il corpo del **piatto doccia 900 INNOVA** è costituito da agglomerato di marmo che, oltre all'accattivante aspetto estetico, rende il prodotto assolutamente idrorepellente e resistente allo sporco. Una delle caratteristiche di design più interessanti del **piatto doccia 900 INNOVA**, è la possibilità di raggiungere la completa uniformità dell'ambiente

bagno sfruttando le grandi lastre del medesimo colore, o scegliere dei materiali a contrasto dalla vasta gamma disponibile. Il piano di calpestio, trattato con nanotecnologie, costituisce una superficie estremamente antiscivolo, secondo norme UNI e B.C.R.A. (British Ceramic Research Association) senza modificarne l'aspetto estetico.

*The body of the **900 INNOVA shower tray** is made of marble agglomerate, which in addition to its attractive appearance, makes the product absolutely water-repellent and resistant to dirt. One of the most interesting design features of the **900 INNOVA shower tray** is the possibility of designing the whole bathroom environment using large slabs of the*

same colour or choosing from the wide range available to create a contrasting effect. The walking surface treated with nanotechnology, constitutes an extremely non-slip surface, according to UNI and B.C.R.A. (British Ceramic Research Association) standards without altering its visual appeal.

I nuovi **piatti doccia 900 INNOVA** sono dotati della tecnologia antibatterica UV-C. Sono gli unici sanitari autosanificanti sul mercato con tecnica testata e protetta da brevetto internazionale con l'abbattimento al 99,5% della carica batterica di *Candida Albicans*, *Enterococcus Fecalis*, *Aspergillus Niger*, *Escherichia Coli*, *Legionella Spp.*

*The new **900 INNOVA shower trays** are equipped with UV-C antibacterial technology. They are the only self-sanitizing sanitary ware on the market with a tested and internationally patented technique with a 99.5% reduction in bacterial load of *Candida Albicans*, *Enterococcus Fecalis*, *Aspergillus Niger*, *Escherichia Coli*, *Legionella Spp.**

PIATTO DOCCIA 900 INNOVA
CON TECNOLOGIA ANTIBATTERICA UV-C
(particolare del sistema in funzione)

SHOWER TRAY 900 INNOVA
WITH UV-C ANTIBACTERIAL TECHNOLOGY
(detail of the system in operation)

La sanificazione ad avvio automatico, oltre alle funzioni di igienizzazione e disinfezione, produce l'effetto germicida contro microrganismi, virus e muffe, eliminando in questo modo tutti i rischi di esposizione dell'uomo a questi agenti nocivi alla salute. Inserita nella posizione più opportuna all'interno del **piatto doccia 900 INNOVA**, si trova la barra LED UV-C che, con le sue radiazioni ultraviolette dalla lunghezza d'onda compresa tra i 100 e i 280 nanometri, distrugge

i legami chimici dei microrganismi inibendone quindi la moltiplicazione. I raggi UV-C infatti distruggono anche i microbi multiresistenti come lo stafilococco aureo resistente alla meticillina (MRSA). Questa caratteristica risulta molto utile ed efficace nell'ambiente medico e ospedaliero, nonché in tutti gli ambienti dove lo stesso sanitario è usato da più persone come hotel, centri benessere, palestre, ecc.

*Automatically activated sanitization, in addition to the hygienization and disinfection functions, produces a germicidal effect against microorganisms, viruses and molds, thus eliminating all risks of human exposure to these harmful to health agents. Inserted inside the **900 INNOVA shower tray**, there is the UV-C LED bar which, through its ultraviolet radiation with a wavelength between 100 and 280 nanometers, destroys the chemical bonds of microorganisms, thus inhibiting*

their multiplication. In fact, UV-C rays destroy even multi-resistant microbes such as methicillin-resistant staphylococcus aureus (MRSA). This feature is very useful and effective in the medical and hospital environment, as well as in all environments where the same sanitary fixture is used by several people such as hotels, wellness centers, gyms, etc.

MATERIALI

MATERIALS

900 Innova by 900 Project progetta e realizza Mobili Bagno e Piatti Doccia in agglomerato di marmo.

Le lastre 300x120 cm, utilizzate per rivestire pavimenti e pareti, sono ricavate da blocchi che vengono poi tagliati a misura, offrendo così un ambiente continuo e unico. Tutti i nostri prodotti possono essere personalizzabili.

900 Innova by 900 Project, designs and manufactures bathroom furniture and shower trays in agglomerate marble.

The 300x120 cm slabs suitable to cover floors and walls, are obtained from blocks and then cut to size, creating a seamless and unique space. All our products are customizable.
